

Building “green”: good for the planet, great for clients

The benefits of building “green” go far beyond protecting our environment, improving our air and water quality, and conserving our natural resources. Commercial interior contractors and general contractors who build green are also helping clients reduce operating costs, enhance asset value and profits, and promote occupant comfort and health. In fact, [a new study](#) by CoStar Group found that “green” buildings significantly outperform non-green buildings in occupancy and sale price.

J.C. Anderson, Inc. is proud to be certified as a LEED® (Leadership in Energy and Environmental Design) commercial interior contractor. As one of Chicagoland’s oldest and largest commercial interior contractors, we have built our reputation on the foundation of trust, quality, and commitment. Those values extend into future generations as we do our part to build a community that will enhance the lives of our children, and the lives of our children’s children.
